

D	E EVROCURE REPORT
K	F-EXPOSURE REPORT
	FCC 47 CFR Part 2.1091 ISED RSS-102
M	aximum permissible exposure
Report Reference No	G0M-1803-7309-TFC091MP-V01
Testing Laboratory	Eurofins Product Service GmbH
Address	Storkower Str. 38c 15526 Reichenwalde Germany
Accreditation	DAKKS Deutsche Akkreditierungsstelle D-PL-12092-01-03  DAKKS - Registration number : D-PL-12092-01-03 (ISED)
	ISED Testing Laboratory site: 3470A-2 DAkkS - Registration number: D-PL-12092-01-04 (FCC) FCC Filed Test Laboratory, RegNo.: 96970
Applicant	Dräger Safety AG & Co. KGaA
Address	Revalstraße 1 23560 Lübeck GERMANY
Test Specification	According to FCC/ISED rules
Standard	FCC 47 CFR 2.1091 ISED RSS-102
Non-Standard Test Method	None
Equipment under Test (EUT):	
Product Description	Fixed Gas Detector
Model(s)	P6100
Additional Model(s)	None
Brand Name(s)	None
Hardware Version(s)	8327000-00
Software Version(s)	GSTox image 8326059 V0.12.1, SW Murata ISA 100 8328374 R1.01.13, SW Telit BLT V3.12.0002
FCC-ID	X6O-RC001
IC	5895F-RC001
Test Result	PASSED

Test Report No.: G0M-1803-7309-TFC091MP-V01

Possible test case verdicts:					
required by standard but not tested		N/T			
not required by standard		N/R			
test object does meet the requirement		P(PASS)	P(PASS)		
test object does not meet the requirement		F(FAIL)	F(FAIL)		
Testing:					
Test Lab Temperature		15 - 35 °C			
Test Lab Humidity		30 – 50 %			
Date of receipt of test item		2019-05-21 (T	est Sample ID 24125)		
Report:					
Compiled by	Abdullah Al Jam	ıal			
Tested by (+ signature) (Responsible for Test)	Abdullah Al Jamal		ر حے ا		
Approved by (+ signature) (Head of Lab)	Christian Weber		- hobe		
Date of Issue	2020-01-20				
Total number of pages	17				
General Remarks:	.1				
The test results presented in this report relate only to the object tested.  The results contained in this report reflect the results for this particular model and serial number. It is the responsibility of the manufacturer to ensure that all production models meet the intent of the requirements detailed within this report.  This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.  Additional Comments:					
None.					

## **ADDITIONAL VARIANTS**

	Additional Variants (not tested and not evaluated variants)				
Not-tested Variant	Description				
1	Product Type Description	P6100 Repeater ISA			
	Model name	Polytron Repeater ISA			
	Brand name	Not specified			
	Hardware Version	Not specified			
	Software Version	Not specified			
	PMN	Polytron Repeater ISA			
	HVIN	RC001			
	FVIN	N/A			
	HMN	N/A			

Comment: Those named additional variants above have not been tested. Those additional variants of the series have been declared by the manufacturer. The test report explicitly states that those variants were neither tested nor assessed nor evaluated.

## **VERSION HISTORY**

# 3 RF-Exposure classification

RF-Exposure Categories				
Fixed	A fixed device is defined as a device physically secured at one fixed location and cannot be easily re-located.			
Mobile	A mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons.			
Portable	A portable device is defined as a transmitting device designed to be used so that the radiating structure(s) of the device is/are within 20 centimeters of the body of the user.			

RF-Exposure Categories				
Occupational / Controlled	Limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.			
General population / Uncontrolled	Exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.			

# 4 RF-Exposure limits

FCC Limits – General Population / Uncontrolled Exposure						
Frequency range Electric field Magnetic field Power density Averaging tir [MHz] strength [V/M] strength [A/M] [W/m²] [min]						
0.3 – 1.34	614	1.63	1000	30		
1.34 – 30	824/f	2.19/f	1800/f <sup>2</sup>	30

### 5 RF-Exposure Evaluation

## **Evaluation Relations**

$$\begin{split} \lambda[m] &= \frac{c \left[ \frac{m}{S} \right]}{f[Hz]} \; ; \; R_{FF}[m] \geq \frac{2 \cdot D[m]^2}{\lambda[m]} \\ S[W/m^2] &= \frac{P_{EJ,R,P}[W]}{4\pi R[m]^2} \; ; \; R[m] = \sqrt{\frac{P_{EJ,R,P}[W]}{4\pi S[W/m^2]}} \\ DCC \; [dB] &= 10 \cdot Log_{10} \left( \frac{DC[\%]}{100} \right) \\ \sum_{i=1}^{N} \frac{S_i \left[ \frac{W}{m^2} \right]}{S_{Li} \left[ \frac{W}{m^2} \right]} + \sum_{j=1}^{M} \left( \frac{E_j \left[ \frac{V}{m} \right]}{E_{Lj} \left[ \frac{V}{m} \right]} \right)^2 + \sum_{k=1}^{O} \left( \frac{H_k \left[ \frac{A}{m} \right]}{H_{Lk} \left[ \frac{A}{m} \right]} \right)^2 < 1 \end{split}$$

#### **Evaluation Procedure**

#### Standalone operation evaluation:

For each radio and frequency band the worst case transmission mode with the highest peak conducted or radiated power is evaluated at the frequency that results in the most restrictive rf-exposure limit. From the peak power values, antenna gains and duty cycles taken from the reference documents, the source average radiated power values are calculated. From the average radiated power the power densities at antenna far-field distance is calculated. The distance from the radiation source for compliance power density is calculated. If the separation distance is lower than the far-field distance, the far-field distance is given as compliance separation distance because the plane wave power density assessment is only valid in the far-field of the radiation source.

For radiation sources for which the average electric and magnetic fields are measured using field probes, the measured field strength values are compared to the reference limits. For those sources no calculations are performed. Compliance with the reference values is determined with the near field measurements.

### Concurrent operation evaluation:

First the evaluation distance is set to an appropriate value. For all radiation sources for which power densities are calculated, the power densities at the evaluation distance are calculated and for all other sources the electric or magnetic field strengths are measured using field probes. Finally the ratios of the power densities and/or field strength values and the corresponding limits are calculated and summed and the sum is compared to the maximum of 1.

Test Report No.: G0M-1803-7309-TFC091MP-V01

# 6 Single Source Evaluation Results - FCC
